

WHAT IS CLAIMED IS:

Sub
A2

1. An image data processing system comprising:
a digital camera having a camera section for converting a
light from a substance to be recorded into an image data, and a
first memory section for storing said image data therein;
first processing means, for storing the image data, provided
outside said digital camera and having a second memory section for
storing said image data therein;
second processing means for processing said image data in
accordance with instructions from said first processing means;
communication apparatus having communication sections which
transmit and receive data, said communication sections being
provided for said digital camera, said first processing means and
said second processing means, and communication circuits for
connecting said communication sections to each other; and
instruction means for giving instructions on processing to
be executed by said first processing means from said digital camera.

2. The image data processing system according to Claim 1, wherein
said second processing means includes a print section for printing
the image.

3. The image data processing system according to Claim 2, wherein
said second processing means includes a third memory section for
storing the image data.

1 4. The image data processing system according to Claim 3, wherein
 2 the system includes a plurality of said second processing means
 3 and said digital camera includes selecting means for selecting said
 4 second processing means.

1 5. A digital camera comprising:
 2 a camera section for converting a light from a substance to
 3 be recorded into an image data;
 4 a memory section for storing said image data therein;
 5 instruction means for instructing processing means on
 6 processing to be executed disposed outside the digital camera and
 7 having a second memory section for storing said image data therein;
 8 and
 9 a connecting section for connecting with communication
 10 circuit capable of transmitting the instructions from said
 11 instruction means and said image data.

1 6. A processing device for executing processing in accordance
 2 with instructions from a digital camera provide outside,
 3 comprising:
 4 reception means for receiving the instructions from said
 5 digital camera;
 6 a memory section for storing image data transmitted from said
 7 digital camera; and
 8 output means for outputting said image data to external

9 processing device disposed outside in accordance with the
10 instructions from said digital camera that have been received by
11 said reception means.
